**Re: Summary of Changes to Attachment A of the Application for Underground Injection Control Permit, Florence Copper Project, Florence, Arizona**

Dear Ms. Rumrill:

On November 6, 2020, Florence Copper Inc. (Florence Copper) transmitted a revised Attachment A to our application for an Underground Injection Control (UIC) Permit submitted to the U.S. Environmental Protection Agency (USEPA) on October 4, 2019 (Application). All text additions were made in Section A.2 of the Revised Attachment A.

The revised Attachment A includes new language incorporated into Section A.2 describing the planned incremental startup process of the resource block sections. The additional text describes the placement of perimeter, observation, and point of compliance wells during the first year of In-Situ Copper Recovery (ISCR) operations as previously described in the supplemental information transmittal provided to USEPA on September 24, 2020. The additional text also describes typical hydraulic control configuration that will be employed during periods of time when rinsing and active ISCR operations are ongoing simultaneously, as previously submitted in the supplemental information transmittal provided to USEPA on October 9, 2020. Figures A-18 through A-20, which were previously submitted, were also incorporated into the revised Attachment.

Please contact me at 520-316-3710 if you require any additional information.

Sincerely,  
Florence Copper Inc.
